

# Sleepytroll®

*From one parent to another*

## The most innovative Baby Rocker on the market

- Fits All Strollers
- Attaches easily
- Built-in Rechargeable Battery
- 4 international charger adapters
- Built-In Sound and Motion Sensor
- Adjustable Speed Settings
- Can be used in all weather
- Multiple usage areas – adapters available
- Designed in Norway – Patented Globally

Sleepytroll is the world's first automatic sensor-controlled baby rocker. It can easily and safely attach to any stroller and gently calms your baby through its rocking movement.

The sensor detects sound and movement, and automatically begins to rock the stroller. After activating the sensors, Sleepytroll rocks for 3 minutes and then returns to sleep monitoring mode. It can also be operated manually. The device will then rock for 40 minutes before shutting down automatically. The rocking can be adjusted at five different intensity levels.

Sleepytroll has multiple usage areas, like the stroller and car seat, and with the help of Sleepytroll Bed Rocker Feet and Bed Adapter Sleepytroll can also rock the crib.

### Multiple usage areas:
