

KODAK EKTAR H35N

Half Frame Film Camera

New Version with New Features

A Camera of Limitless Creativity

[Confidential, Do Not Disclose] The KODAK EKTAR H35 sparked a half-frame craze upon its launch, and it continues to hold a special place among the film enthusiasts for its film-saving charm. Here, let us present to you new and advanced version – the KODAK EKTAR H35N Half Frame Film Camera!

Featuring built-in star filter, bulb function with a tripod hole, and a coated partial glass lens, the KODAK EKTAR H35N possesses three new highlights that are rarely found on other reusable film cameras. The star filter adds special effects when shooting illuminating objects, giving room for creating dreamy outcomes. The bulb shutter and the tripod hole work together to support long exposure photography, another way to make use of the camera in content creation.

The KODAK EKTAR H35N is available in six colors, with either a stripe pattern or shiny metallic surface that enhances its aesthetic appeal, therefore making it perfect for various social occasions. The camera also features a refined viewfinder and rewind knob. With these new advancements and features, creating artsy images with the camera is no trouble!

Unlocking New Features

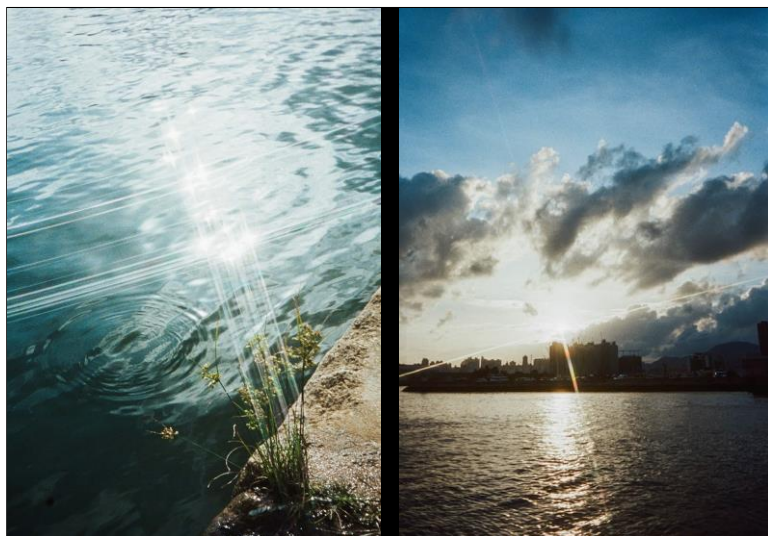

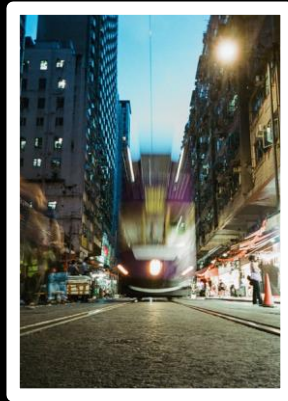

Coated, Improved Lens

The H35N Camera features a coated, improved optic lens. One element of acrylic lens is replaced by glass lens which helps to improve the sharpness of the images.

Bulb Function (Long Exposure)

With the bulb shutter and a cable release, you can control the duration of shooting and capture the trail of moving objects. Long exposure function is usually applied at night. We have also added a tripod hole at the bottom of the camera. For best results, use a tripod to keep your camera steady while using the bulb function.

*Cable release and tripod are not included with the product

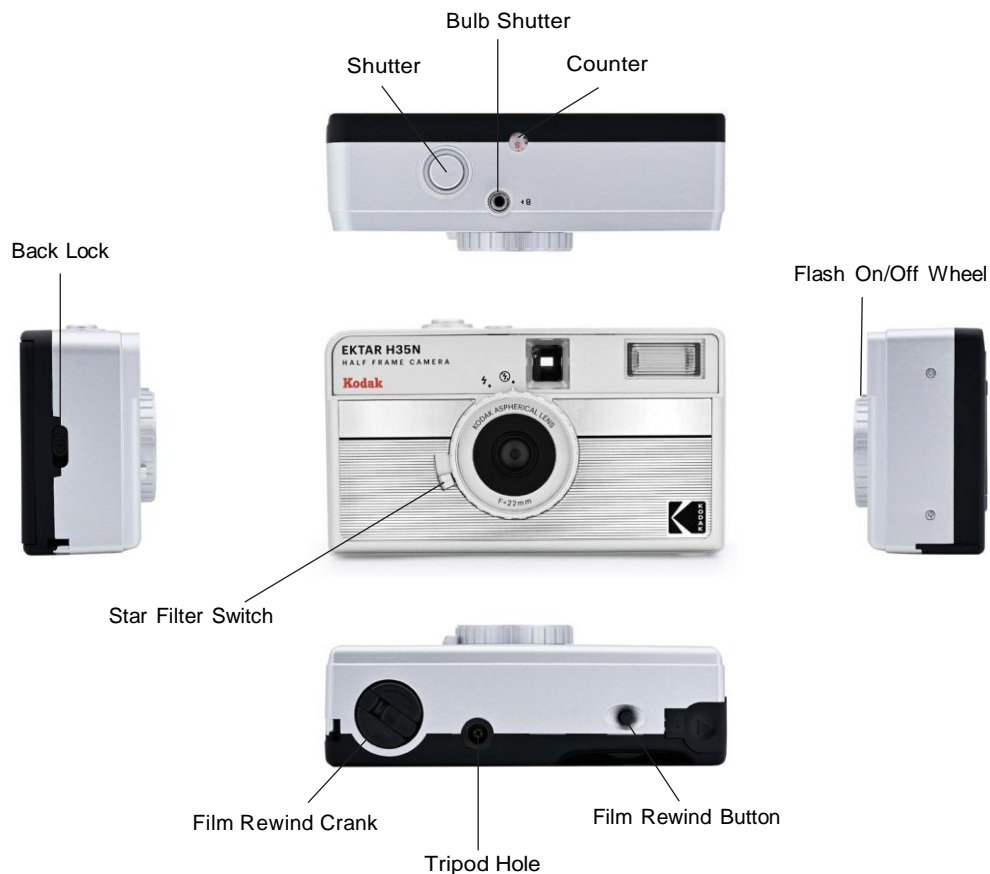

Built-in Star Filter

The filter is used to create a four-beam flare on light spots. It is commonly used in shooting night illuminations, reflections on water surfaces, and scenes with tiny light sources.

Fresh Apperances And Colors

We are excited to reveal these two series which features a shiny steel finish at the body front. One series combines the CD-like metallic surface with vivid colors of blue, orange and pink, giving a playful vibe. While another series is stripe patterned. It delivers a low-key lavish feeling with three options of black, silver and green. Having two distinct looks and several colors to pick from, the KODAK EKTAR H35N turns into a perfect chic accessory in the room.
